DETAILED ACTION

Election/Restrictions

1. Claims 3 and 5-26 are withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected species, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in the reply filed on 05/16/05.

Priority

2. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Specification

3. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

5. **Claim 1 is rejected under 35 U.S.C. 102(a) as being anticipated by applicant's admitted prior art (AAPA).**

6. The AAPA described in the instant application discloses (pages 2-3) and shows in Figs. 8A-8C, a method for fabricating a reflective type reflector plate of a reflective liquid crystal display, the method comprising the step of:

- forming a protection layer (702) over a glass substrate (70) after thin film transistors are built on top of the glass substrate (page 2, lines 13-19).

As to the functional limitation such as “to shield off reflection from an exposure stage, so as to enable even distribution of light over the protection layer and shortening of the light exposure time”, the structure disclosed by the AAPA is similar to the claimed structure and since the structure of the claimed invention is capable of performing the functions as claimed, the structure of the AAPA would also perform the functions in a same manner as claimed.

Accordingly, claim 1 is anticipated.

7. **Claim 4 is rejected under 35 U.S.C. 102(e) as being anticipated by Nakayoshi et al., (Nakayoshi), US 2003/0058388.**

8. Nakayoshi discloses and shows in Fig. 6, a reflective type reflector plate of a reflective liquid crystal display, the plate includes a glass substrate (SUB1) on which thin film transistors (not shown), transparent electrodes (PX1) and undulating resin outgrowth (INTL) are formed, wherein a protection layer (PSV1) is formed between the transparent electrodes and the undulating resin outgrowth.

Accordingly, claim 4 is anticipated.

Allowable Subject Matter

9. Claim 2 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

10. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
